

WP FlexiShop

Brandable wordpress
e-commerce theme

3 in 1

- jQuery slider + 2 effects
- 3 different layouts
- Unlimited color and layout possibilities
- Change colors, fonts, backgrounds

WP FlexiShop - A Versatile WP E-Commerce Theme

Documentation File

Theme Support: <http://support.primathemes.com>

Saxon Fletcher
Designer

Agus M
Developer

This theme utilises the powerful WP E -Commerce plugin to create a versatile and feature packed Wordpress powered shop, with 3 different layout options and unlimited color possibilities. Make this theme your own.

Mix up content on the homepage with swappable content areas, and change between 2 different footer areas, or use both! A theme so versatile that you can re-brand it to suit your business by simply changing a few settings.

FEATURES INCLUDE:

- 3 different types of layouts with unlimited branding options
- Homepage slider with 2 different effects
- Featured products, featured posts, and promotions
- Latest products, best sellers, category images
- Custom post type for promotions, links to products, categories or even a custom link!
- Custom post type for homepage slider
- Unlimited background color and font combinations
- Upload your own background image for both the site background and homepage slider background
- 12 widget areas
- 24 different fonts using Google fonts and a selection of hand picked fonts.
- Product Grid View
- Elegant 2 step checkout

This theme requires **WP E-Commerce** Plugin

<http://www.getshopped.org>

WP E-COMMERCE FEATURES INCLUDE:

- Multiple payment options
- Supports Tax
- User accounts and order tracking
- Shipping Options
- Streamlined Checkout
- AJAX Cart Loading
- Integrates with Google Product Search – Your products can now be found through Google!
- much more.

Before you can use FlexiShop Theme, you have to install both **Wordpress** at your domain&hosting and install&activate **WP e-Commerce** Wordpress Plugin.

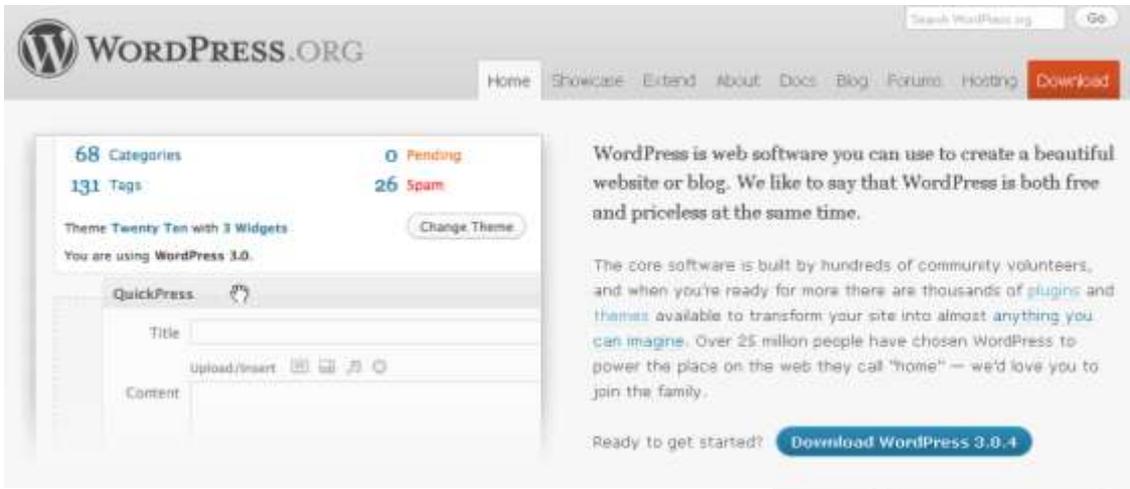

Download Wordpress: <http://wordpress.org>

For detailed Wordpress installation instructions visit http://codex.wordpress.org/Installing_WordPress

Download WP E-commerce Plugin: <http://wordpress.org/extend/plugins/wp-e-commerce>

WP e-Commerce

WP e-Commerce is a Web 2.0 application designed with usability, aesthetics, and presentation in mind.

[Description](#) [Installation](#) [Faq](#) [Screenshots](#) [Changelog](#) [Stats](#)

The WP e-Commerce shopping cart plugin for WordPress is an elegant easy to use fully featured shopping cart application suitable for selling your products, services, and/or files online.

WP e-Commerce is a Web 2.0 application designed with usability, aesthetics, and presentation in mind.

Download Version 3.7.8

Requires WordPress Version:
2.7 or higher

Compatible up to: 3.0.4

Last Updated: 2010-12-8

Average Rating

This page is useful for everyone who **upgrade** from WP e-Commerce 3.7.x to WP e-Commerce 3.8.x.

After upgrading your WP e-Commerce 3.8.x, your products will be gone! 😊
Why? WPEC 3.8.x uses different database tables, you need to update your database...

Update WP e-Commerce

Help ▾

Your WP e-Commerce data needs to be updated. You've upgraded from a previous version of the WP e-Commerce plugin, and your store needs updating. You should [update your database](#) for your store to continue working.

Your WP e-Commerce database needs to be updated for WP e-Commerce 3.8. To perform this update, press the button below. It is highly recommended that you back up your database before performing this update.

Note: If the server times out or runs out of memory, just reload this page, the server will pick up where it left off.

Update WP e-Commerce

Please **BACKUP** Your Website Data and Database **FIRST!!!**

```

Install a theme in .zip format

If you have a theme in a .zip format, you may install it by uploading it here.

You can go to **Appearance > Themes > Install Themes** page and upload your WPFlexiShop ZIP file directly 😊 and then activate WPFlexiShop from your Themes page.

Once you activate WPFlexiShop Theme, you can see Promotions, Sliders, Testimonials, and WPFlexiShop menu.

Go to **Store** → **Settings** → **Presentation**. Please check “Advanced Theme Settings” box!

Advanced Theme Settings

Some Theme files have been moved to your WordPress Theme Folder.

WP e-Commerce provides you the ability to move your theme files to a safe place for theming control. If you want to change the look of your site, select the files you want to edit from the list and click the move button. This will copy the template files to your active WordPress theme.

- cart_widget.php
- category_widget.php
- default.css
- functions.php
- grid_view.php
- list_view.php
- products_page.php
- shopping_cart_page.php
- single_product.php

To change the look of certain aspects of your shop, you can edit the moved files that are found here:

Please read PAGE 7 again!

BAD

Advanced Theme Settings

Some Theme files have been moved to your WordPress Theme Folder.

WP e-Commerce provides you the ability to move your theme files to a safe place for theming control. If you want to change the look of your site, select the files you want to edit from the list and click the move button. This will copy the template files to your active WordPress theme.

- compatibility.css
- wpsc-cart_widget.php
- wpsc-category-list.php
- wpsc-category_widget.php
- wpsc-default.css
- wpsc-featured_product.php
- wpsc-grid_view.php

- wpsc-shopping_cart_page.php
- wpsc-single_product.php
- wpsc-transaction_results.php
- wpsc-user-log.php

If you have moved your files in some other way i.e FTP, you may need to click the Flush Theme Cache. This will refresh the locations WordPress looks for your templates.

Flush Theme Cache

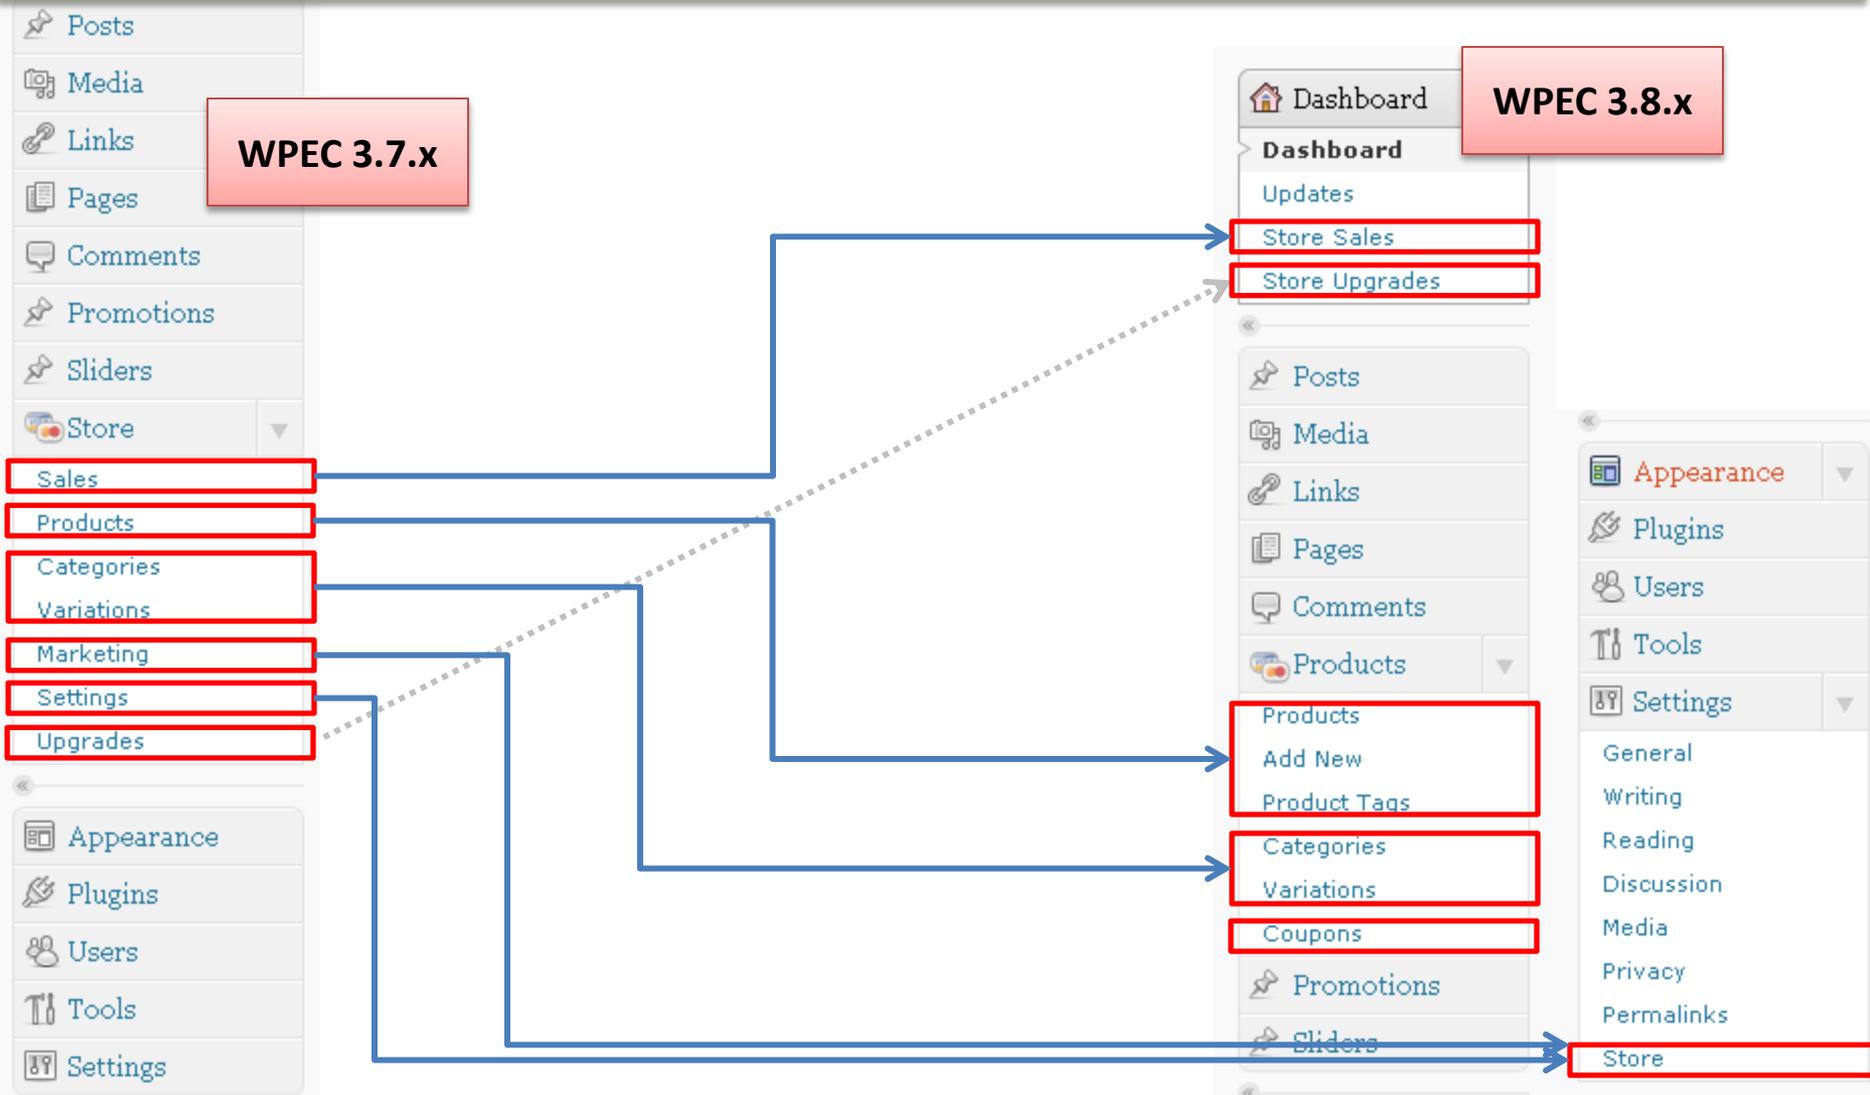

GOOD

Click “Fluss Theme Cache” button

404 ERROR

This is a well known Wordpress bug when using custom post types & taxonomies. Please go to **Settings > Permalinks** page and click “Save Changes” button to update your permalink structure **TWICE!!!**

This page is useful for everyone who **upgrade** from WP e-Commerce 3.7.x to WP e-Commerce 3.8.x.

Go to **Store → Settings → Presentation**. A lot of the wp e-commerce settings are optional, for example breadcrumbs and category images, however there are a few presentation settings you should change to make sure everything works hunky dory.

Thumbnail Settings

Note: Anytime you update any of the thumbnail settings, WPeC will automatically resize all of your thumbnails for you. Depending on how many images you have, this could take awhile.

Default Product Thumbnail Size:

Width: Height:

Default Product Group Thumbnail Size:

Width: Height:

Single Product Image Size:

Width: Height:

Crop Thumbnails:

Yes No

Choosing "Yes" means that thumbnails are cropped to exact dimensions (normally thumbnails are proportional)

Show Thumbnails:

Yes No

WP e-Commerce 3.8.x uses WP custom taxonomy `wpsc_product_category`.
Go to **Products** → **Categories** to manage your product categories.

Categories

Add New Product Category

Name

The name is how it appears on your site.

Slug

The "slug" is the URL-friendly version of the name. It is usually all lowercase and contains only letters, numbers, and hyphens.

Parent

Bulk Actions

<input type="checkbox"/>	Image	Name	Description	Slug	Product
<input type="checkbox"/>		Brands		brands	0
<input type="checkbox"/>		— Another Brand		another-brand	0
<input type="checkbox"/>		— Example Brand		example-brand	0
<input type="checkbox"/>		Categories	Product Categories	categories	0
<input type="checkbox"/>		— Category #1	my first category description...	category-1	2
<input type="checkbox"/>		— Category #2		category-2	1
<input type="checkbox"/>		— — Sub Category #2.1		sub-category-2-1	1

If you are familiar with previous version WP e-Commerce 3.7.x, you have to know that there is no more **“Category Groups”**.
Note: you can choose your **first level** of product categories as your category group name!

WP e-Commerce 3.8.x uses WP custom taxonomy **wpsc-variation**.
Go to **Products** → **Variations** to manage your product variations.

Dashboard

Simple Layout: The simple layout is elegant and sophisticated by default, yet though a basic background change and a few color swaps, you can change the entire look to suit your business and brand.

Full Layout: The full layout adds a changeable footer and header area to inject a bit of color into the design. You can even add a background image to the slider area for unlimited possibilities (e.g. a new background for each season).

Boxed Layout: The boxed layout is the safest choice when customising the theme. Add a background color or image, swap out fonts, for a completely different look.

Homepage Slider
(read the next page)

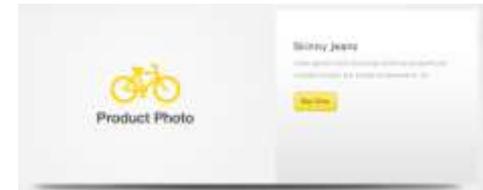

Go to **Sliders** → **Add New** to create your slider.

Featured Slider Support 3 content types.

- **Featured Post/Page**

Note: don't forget to upload and set featured image for this posts/pages.

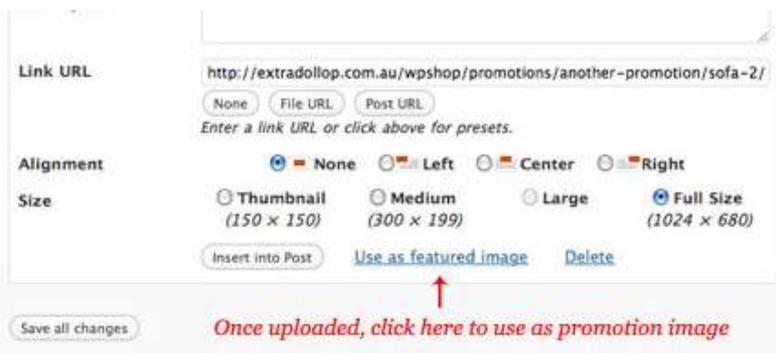

- **Featured Product**

- **Featured Promotion**

If you need flexible slider with custom image and custom link (not a post/page), then Promotion post type is the best choice. Go to **Promotions** → **Add New** to create a promotion slide before you can use it when add new Slider post.

Promotions are a custom post type which were made to be used as a way of displaying current sales, special deals, or even just a featured product. In fact, they can be used for pretty much anything! You have the option for the promotion to be linked to a product, a category or a custom link, its completely up to you! Just upload an image using the “Promotion Image” section at the appropriate width (**980 by 375**, larger images will be cropped down to fit), and bobs your uncle!

Promotions post type can also be used with prettyPhoto, this means linking to photos, videos and even external links. Example: To link to a vimeo video, simply use an external link, paste in the web address of the Vimeo video, and click enable lightbox. Done!

Tools you'll need for translating

The only tool you need for translating a WordPress theme is [Poedit](http://www.poedit.net/) <http://www.poedit.net/>

How to translate the theme

To translate the theme, you need to find the file named **en_EN.po** located in the **WPFlexishop/languages** theme folder. Open it. From this point, you must go through every line of text and translate it to your language. You must first click the text string you want to translate. Then, you type it in your language at the bottom of the screen.

How to save your translation

For example, French is **fr_FR**, so I would save the translation as **fr_FR.po**.

You will see two new files, **fr_FR.po** and **fr_FR.mo**

How to use theme translations

To use a translation, you first need to add the **.mo** and **.po** files to your **WPFlexishop/languages** theme folder. Then, you'll need to make sure your **wp-config.php** file matches your language files.

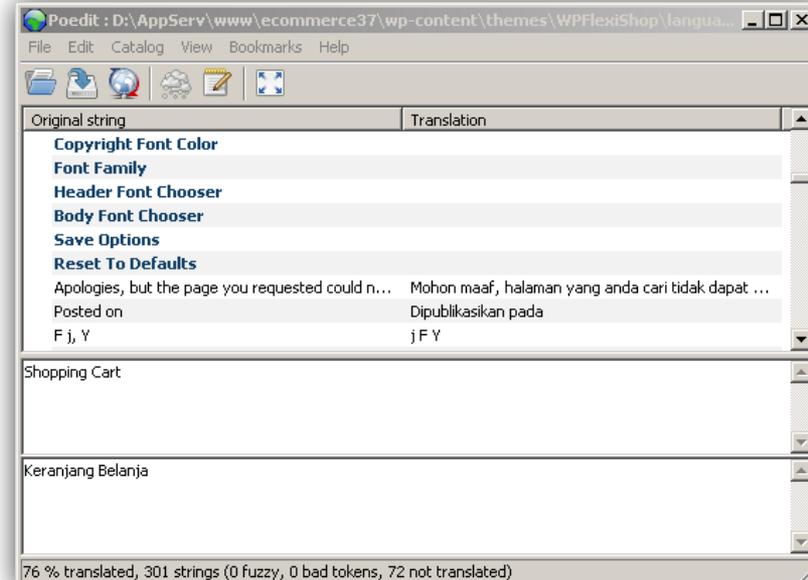

For example, if using a French translation, you'll need to add the **fr_FR.po** and **fr_FR.mo** files to your **WPFlexishop/languages** theme folder. Then, you'll want to set your language in **wp-config.php**, like this:

```
define ('WPLANG', 'fr_FR');
```

Save that file. Now you can use the theme in your language!

NOTE:

Some strings are translated by WP E-commerce plugin. Please check **/wp-content/plugins/wp-e-commerce/languages** folder to find WP E-commerce translation files.

CSS Files and Structure

This theme uses one main css file along with a css file for each of the individual layouts. **Style.css** controls all common elements whilst **boxedlayout.css** and **fulllayout.css** control layout specific elements

JavaScript

This theme utilises the jQuery framework and imports a number of custom and 3rd party scripts .

Public Site

jQuery Easing (jquery.easing.1.3.js) - which is used for all transition effects

jQuery bxSlider (jquery.bxSlider.min.js) - created by Steven Wanderski, this wonderful plugin controls all sliding elements in the site, you can find more information at <http://bxslider.com/>

initiate.js - This is a custom file which basically sets up all jQuery event handlers and functions

Admin Scripts

jQuery Color Picker (admin/colorpicker.js) - this script is used to control all color picker fields within the theme options page. More information at <http://www.eyecon.ro/colorpicker/>

jQuery Date Input (admin/jquery.date_input.min.js) - this script controls all date fields and allows for easy date picking. Created by Jon Leighton at <http://jonathanleighton.com/projects/date-input>

Custom Admin Script (admin.js) - a custom script to initiate all event handlers and control the showing/hiding of various dependant fields

Resources

This theme uses a number of resources developed by the web community.

The theme is based on the popular Starkers Theme by Elliot Jay Stock <http://www.starkerstheme.com/>
[bxSlider](#), [jQuery ColorPicker](#), [Date Input](#), [jQuery Easing Plugin](#), [jQuery](#)

Further Support

Once again, thank you so much for purchasing this theme. If you have any further questions be sure post a topic at our support forum <http://support.primathemes.com>, and I will get back to you as soon as possible! I also accept requests, so if you have an idea, post a topic/comment and I will do my best to implement it as a free update.
